CMIP6 historical warming against the GSAT ensemble (37 models)

One member per model from Hausfather et al. (2022), historical spliced to SSP2-4.5 from 2015 (dot); bar spans the 2–4 available SSP splices. GSAT ensemble median (line) and 5–95% (shading). Descriptive only: with one member and no control run per model, no internal-variability test is applied. HadGEM3-GC31-MM, the predecessor of UKCM2a-0-HH, is not in the dataset.
